

DOWSING AND
ENERGY HEALING:
ANCIENT SCIENCE

THE SCIENCE OF SUBTLE ENERGIES

The earth is crisscrossed with lines of very low frequency energies called telluric currents, caused by magnetic fields, underground streams, veins of metals, etc. (Source: *Harmonic 33*, *Harmonic 695* by Captain Bruce Cathie.)

Some individuals are able to sense these energies using instruments such as dowsing rods or pendulums, or simply through their bare hands.

Since the beginning of the scientific age, the ability to perceive subtle energies was regarded as a superstition.

However, today, science is beginning to validate these practices.

A dowser, from an 18th century French book about superstitions.

HOW DOWSING WORKS

Divining rods and all common dowsing devices are the simplest forms of electroscopes.

The divining rods are charged with static electricity from the dowser's own body.

This static electricity can be measured with a simple millivolt meter.

The amount of voltage will vary depending on the person. A good dowser will have a high reading, above 100 mv, while a poor dowser may read as low as 0 mv.

Finding Water With A Forked Stick May Not Be A Hoax

Dowsing Data Defy the Skeptics

BY JIM WILSON

Published in the November 1998 issue.

Popular Mechanics

- Researchers analyzed the successes and failures of dowsers in attempting to locate water at more than 2000 sites in arid regions of Sri Lanka, Zaire, Kenya, Namibia and Yemen over a 10-year period.
- To do this, researchers teamed geological experts with experienced dowsers and then set up a scientific study group to evaluate the results.
- Drill crews guided by dowsers didn't hit water every time, but their success rate was impressive.
- In Sri Lanka, for example, they drilled 691 holes and had **an overall success rate of 96 percent.**

ALBERT EINSTEIN ON DOWSING

I know very well that many scientists consider dowsing as a type of superstition. According to my conviction this is, however, unjustified. The dowsing rod is a simple instrument which shows the reaction of the human nervous system to certain factors which are unknown to us at this time.

Albert Einstein

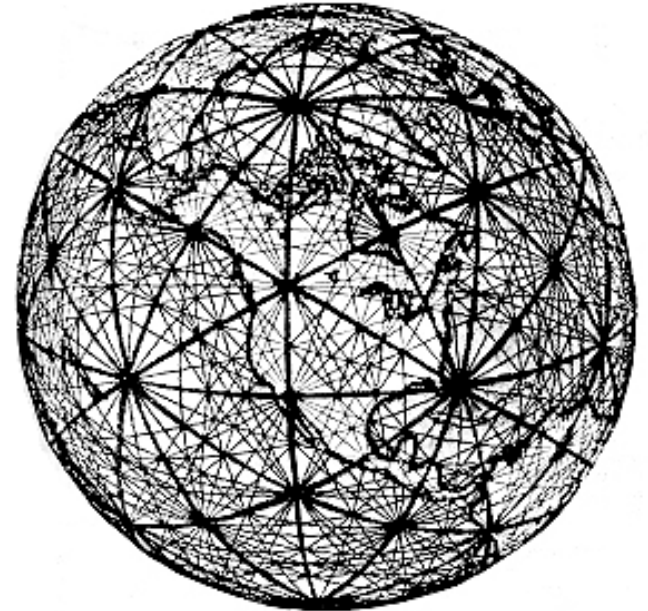

Letter to Mr. Herman E. Peisach,
February 15, 1946

PLANETARY ENERGY GRID

Until recently, scientists considered the planetary energy grid theory to be pseudoscience.

Yet today we have extremely sensitive instruments that can detect these energies.

Plato, the Greek philosopher, recognized the patterns of the grids. He devised a theory regarding his belief that the earth's basic structure evolved from a simple geometric shape to more complex geometric shapes.

ANCIENT MONUMENTS ON IMPORTANT EARTH ENERGY POINTS

The following important megalithic sites are aligned on or within one quarter degree of this great circle:

- Easter Island
- Nazca
- Ollantaytambo
- Paratoari
- Tassili n'Ajjer
- Giza (Great Pyramid)
- Petra
- Perseopolis
- Khajuraho
- Pyay
- Sukothai
- Anatom Island.
- Machupicchu and Cuzco
- Mohenjo Daro and
- Sumerian city of Ur
- Angkor temples in
- Mouth of the Amazon
- Mouth of the Tigris-Euphrates
- Bay of Bengal near the mouth of the Ganges.

Telluric Currents: The Natural Environment and Interactions with Man-made Systems

16

LOUIS J. LANZEROTTI
AT&T Bell Laboratories

GIOVANNI P. GREGORI
Istituto di Fisica dell'Atmosfera, Roma

INTRODUCTION

Telluric currents consist of both the natural electric currents flowing within the Earth, including the oceans, and the electric currents originating from man-made systems. Telluric currents could also be considered to include geodynamo currents, i.e., the electric currents that are presumed to flow in the Earth's core and are responsible for the generation of the "permanent" geomagnetic field. This review excludes geodynamo considerations from its purview.

There has been an evolution (see Appendix) in the terminology in the English-language scientific literature related to telluric currents. A common former term used for telluric currents has been "Earth currents," a term that was widely used by Chapman and Bartels (1940) in their classic work, whereas Price (1967) preferred "telluric currents." A difference between the two terms can be recognized in reading historical papers: an impression is obtained that Earth's currents was the name applied to the natural currents (or, more properly, voltages) that are measured between two electrodes which are grounded at some distance apart. Independent of the cause, the observed current was termed an Earth's current. It later became evident that electric currents also flow in seawater. Therefore, the term telluric currents can be interpreted to include currents flowing both

within the solid Earth and within the seas and oceans. However, we note that Earth currents and ocean currents do not form independent electric-current systems. On the contrary, leakage currents exist between continental areas and oceans (see, e.g., references in Gregori and Lanzerotti, 1982; Jones, 1983). In the early French and Italian scientific literature on the subject, however, the term telluric (derived from the Latin *tellus*, for Earth) was always used (e.g., Blavier, 1884; Battelli, 1888; Moureaux, 1896).

The fundamental causes of telluric currents are now believed to be understood. They are produced either through electromagnetic induction by the time-varying, external-origin geomagnetic field or whenever a conducting body (such as seawater) moves (because of tides or other reason) across the Earth's permanent magnetic field. Both causes produce telluric currents, which, in turn, produce magnetic fields of their own—fields that add to the external origin geomagnetic field and produce a feedback on the ionosphere current system (a feedback that, however, is negligible; see, e.g., Malin, 1970).

The complexities associated with telluric currents arise from the complexities in the external sources and in the conductivity structure of the Earth itself. Such complexities have led earlier workers to make statements such as "the simple laws of electromagnetic induction do

Scientists are now studying telluric currents with specialized instruments.

A good dowser and/or healer can feel these currents and energy points with his or her hands.

“TELLURIC CURRENTS” from WIKIPEDIA

A **telluric current** (from Latin *tellūs*, "earth") is an [electric current](#) which moves underground or through the sea. Telluric currents result from both natural causes and human activity, and the discrete currents interact in a complex pattern. The currents are [extremely low frequency](#) and travel over large areas at or near the surface of the Earth.

Telluric currents are phenomena observed in the Earth's [crust](#) and [mantle](#). Telluric currents flow in the surface layers of the earth. The electric potential on the Earth's surface can be measured at different points, enabling us to calculate the magnitudes and directions of the telluric currents and thence the Earth's [conductance](#).

Both the telluric and [magnetotelluric](#) methods are used for exploring the structure beneath the Earth's surface (such as in industrial prospecting). For [mineral](#) exploration the targets are conductive [ore](#) bodies. Other uses include exploration of [geothermal](#) fields, [petroleum](#) reservoirs, fault zones, ground water, [magma](#) chambers, and [plate tectonic](#) boundaries. Telluric currents can be harnessed to produce a useful low voltage current by means of [earth batteries](#). Such devices were used for [telegraph](#) systems in the United States as far back as 1859.

STANDING STONES, TEMPLES AND CHURCHES SITED OVER ENERGY SPOTS ON THE EARTH'S SURFACE

Two types of spots on the Earth's surface, which a dowser can detect with dowsing rods, a pendulum or bare hands.

ENERGY SPOTS

SACRED SPOTS

Geoffrey has found that virtually all standing stones, temples and churches built before 1900 are constructed over a sacred spot or an energy spot. In a few cases they are constructed over one of each.

In most ancient cathedrals, the energy spot is under the Baptismal font.

Like all cathedrals, the Washington National Cathedral is built over an energy spot.

What is unusual in the Washington National Cathedral is the location of this energy spot, at the front entrance rather than under the altar or the baptismal font.

ENERGY SPOTS and SOIL FERTILITY

Researchers such as Phil Callahan believe that ancient peoples erected standing stones, round towers, monuments, etc. on energy spots as a way of increasing the fertility of the soil

Geoffrey visited a vegetable garden in Wisconsin where the gardener had erected a small pyramid of wood over an energy spot in the middle of the garden. The vegetation was incredibly lush and she had no problems with insect pests.

Individuals sensitive enough to pick up these energy spots would have been highly valued in ancient cultures.

ENERGY SPOTS IN WASHINGTON, DC

The Masons who sited, designed and constructed the city of Washington, DC knew where the energy spots were!

There is an energy spot under the dome of the Capitol and inside the Building Museum.

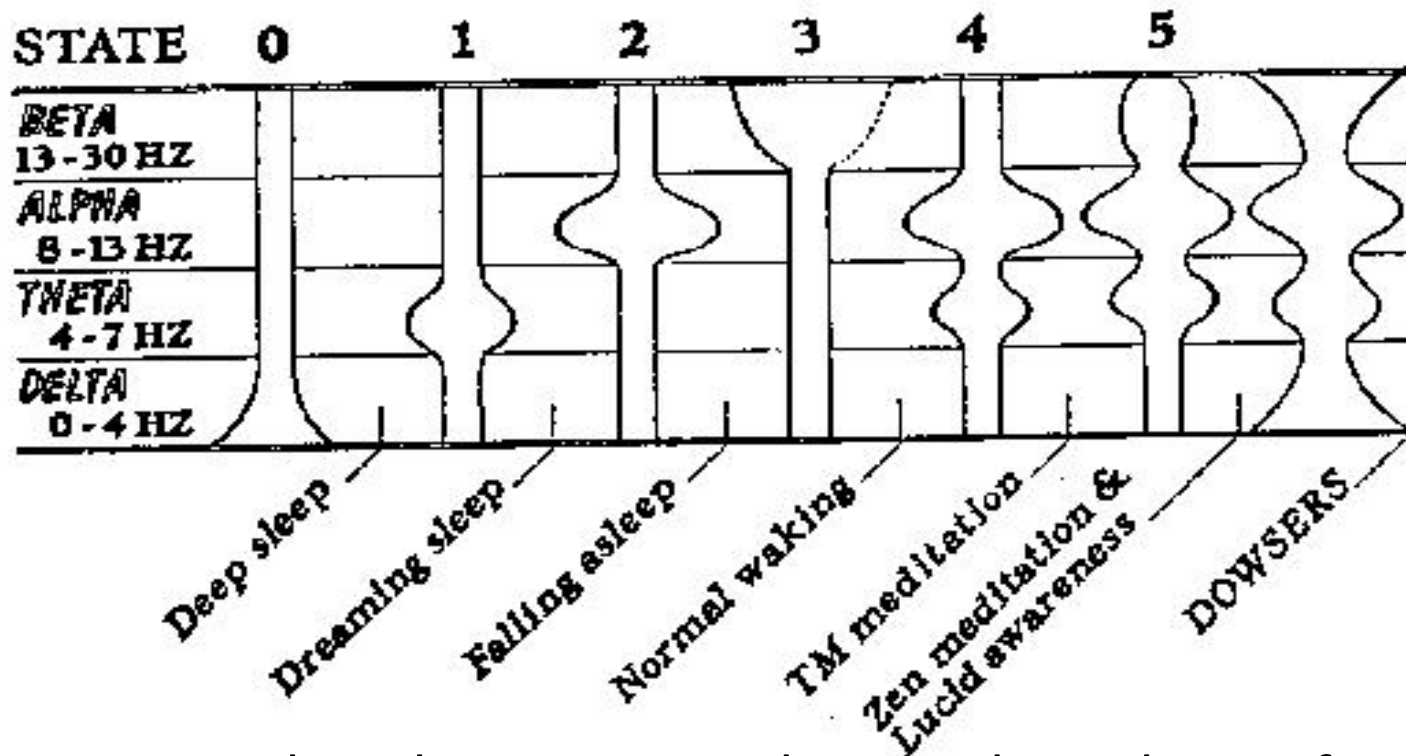

There is a very powerful energy spot at the Washington Monument. The placement of the monument over this energy spot may explain why it is off center of the line between the Capitol and the Lincoln Memorial.

BRAIN PATTERNS CHARACTERISTIC OF DOWSERS

As measured on the 'Mind Mirror' by Edith M. Jurka, M.D., Diplomate of the American Board of Psychiatry and Neurology. Abstracted from 'The American Dowser', Volume 23, No.1 - February 1983 by Barbara Prisbe, a past Director of CSQ, and Editor of 'The American Dowser'.

Dowsers show brain patterns that combine those of ALL sleeping states PLUS normal waking, with higher amplitudes than those in Transcendental or Zen meditation.

DOWSING WITH A PENDULUM

One instrument dowsers use is a pendulum.

The pendulum can be used to detect energy spots and also to get answers to questions.

The mind needs to be very clear to use the pendulum.

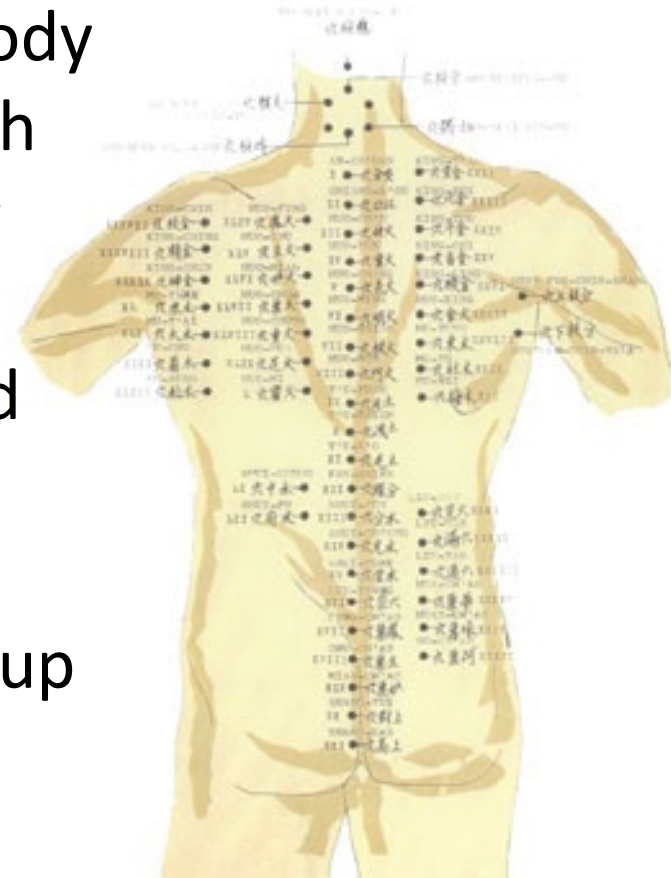

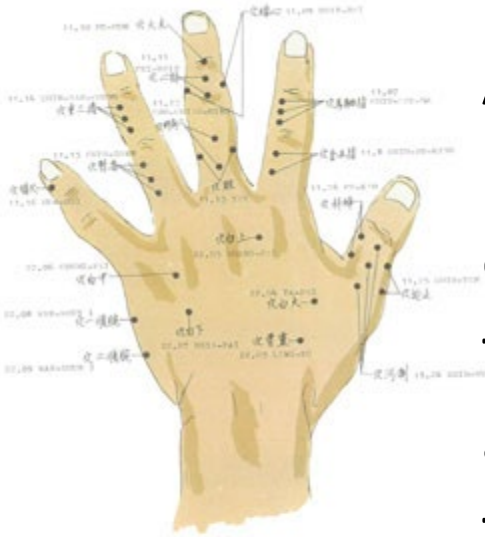

The pendulum should never be used to ask questions about the future or emotional topics.

ENERGY SPOTS IN THE BODY

As with the earth, the body has areas or spots of high energy, as recognized by the Chinese system of acupuncture, formulated thousands of years ago.

A good dowser can pick up these spots on the body just as he or she can pinpoint them on the Earth.

Moving away from the spiritual world—the “Fall.”

Still in dream-like state; not fully individual

Everyone had “psychic powers.”

Accessed spiritual world through fasting, vegetarian diet, drugs, meditation, initiation rites.

Completely immersed in matter, little connection with the spiritual world but now fully individual.

Old methods of access to spiritual world are not appropriate.

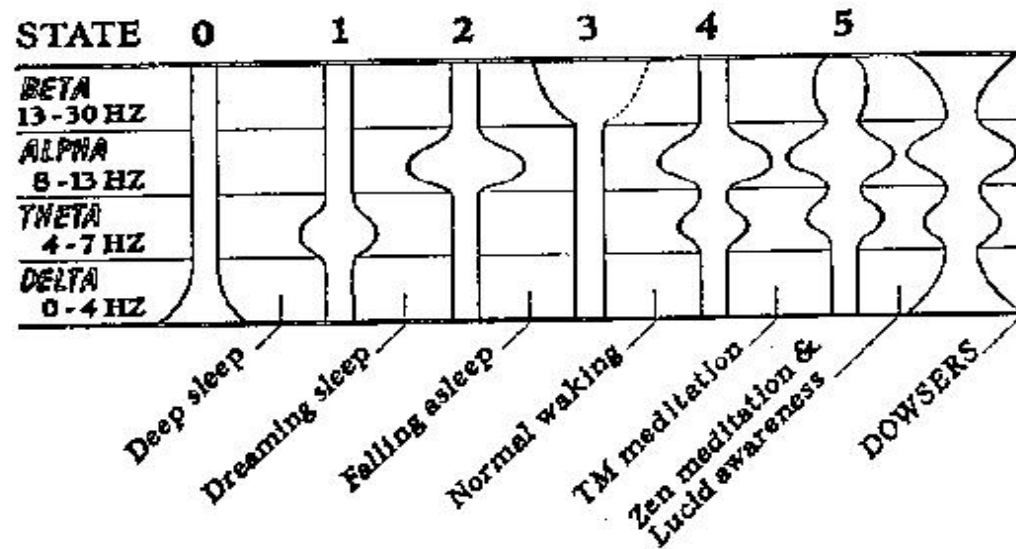

We will return with our own conscious efforts—Parable of the Prodigal Son.

HOW DOES FULLY INDIVIDUALIZED, “FALLEN” MODERN MAN REACCESS THE SPIRITUAL WORLD?

Always be honest with yourself and others.

Do your life’s work conscientiously and thoroughly.

Be very aware of your state of consciousness when you first wake up...

THE UNICORN

Symbol of the development of the third eye through conscious efforts of thinking.

A RECENT STUDY ON ENERGY HEALING

Study by Dolores Krieger, nurse and teacher at New York University.

A Hungarian healer, Oskar Estebany, treated 49 patients, suffering from broad range of illnesses; there were 29 patients with similar illnesses serving as controls.

Hemoglobin levels of treated groups increased much more than hemoglobin levels of untreated patients.

This result, which went along with an increase in energy and vitality, lasted a full year after treatment.

Source: www.parapsych.org/psychic_healing.htm

TRUE HEALING IS A TWO-WAY STREET

Often people think that healing is something that is done to them—either by a doctor or a healer.

But true healing requires effort on the part of the patient, specifically:

- Be RECEPTIVE to the energy of healing

- Have GOALS

- A change in the way of THINKING

- A change in the way of EATING

When the patient is willing to change, the work of the healer—whether an energy healer, alternative practitioner or conventional doctor—will be much more effective.

HOW GEOFFREY GOT STARTED

On his farm in New Zealand, he practiced dowsing and pendulum work, starting in 1952.

In 1976, he witnessed a famous healer named Colin Lambert doing a healing. He felt as though my hands were up on the stage with his, doing the work.

Three days later he called on some friends. The wife was suffering from nausea from chemotherapy. She invited him to try healing work on her, and her nausea disappeared.

Geoffrey found that he had Guides whom he could visualize in a meditative state, and they instructed him for several years. After that time, he was told he didn't need them anymore.

He also had an experience that could be called the opening of the pineal gland, which occurred after a long meditation. At the end of the meditation, peacock feathers were bounced on his cranium while finger pressure was applied to his forehead. He felt a total release from the solar plexus. He had a searing pain between the eyes for five days. After that he found himself able to see through this "third eye" to determine areas of disharmony in the body.

THE CLENDINNING TECHNIQUE OF ENERGY HEALING

To do the Clendinning Technique, Geoffrey puts himself in a semi-meditative state while putting tension in his hands. In so doing, he can pick up areas of positive and negative energy through his hands and also through the third eye. The main steps are:

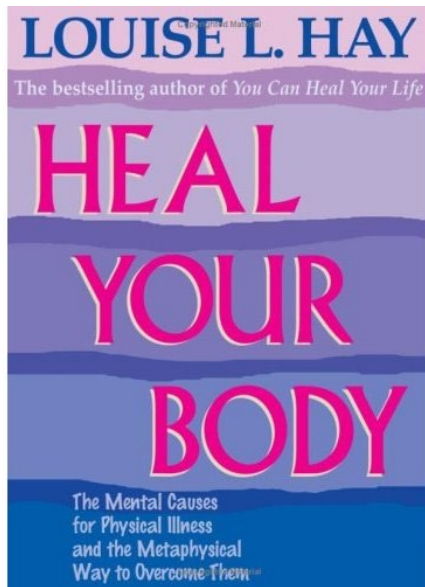

1. Clear the aura of negative energy.
2. Remove any extra “entity” as needed; about 5% of people are affected in this way—and they usually know it!
3. “Dowse” the body for areas of disharmony.
4. Restore energy to areas of the body that need healing.
5. On some occasions, use the energy from his hands to perform a kind of psychic surgery.
6. Using his fingers as a kind of pendulum, ask questions of the body to determine the types of nutrients and foods it needs to heal.
7. Point out the possible psychosomatic reasons for illness, using *Heal Your Body* by Louise Hay or *Permanent Healing* by Daniel Condron.
8. Direct the subject to the Joy of Living!

I AM AFFIRMATIONS

- I AM** so strong that nothing can disturb my peace of mind.
- I AM** talking health, happiness and prosperity to every person I meet.
- I AM** making all my friends feel that there is something special in them.
- I AM** looking at the sunny side of everything and making my optimism come true.
- I AM** thinking only of the best, working only for the best, and expecting only the best.
- I AM** just as enthusiastic about the success of others, as I am about my own.
- I AM** forgetting the mistakes of the past and pressing on to the greater achievements of the future.
- I AM** too large for worry, too noble for anger, too strong for fear and too happy to permit the presence of trouble.
- I AM** wearing a cheerful countenance at all times and giving every living creature I meet a smile.

TRULY, WE ARE WHAT WE THINK!
